

# **ManCave Sunday – Thanksgiving Aftermath (Open Hours) starts November 27, 2016 at 12:15PM**

I'm not so much worried about Cincy's post-season as I am about what to do with my Thanksgiving leftovers. Can I devour all of last Thursday's turkey before I grow tired of it? I don't know. What I do know is that I will be exploring the dark crevices of the area we call the rafters in an attempt to go through the stuff that's up there. Then some Arduino play. Nothing heavy. All are welcome.

# **AFIT Students Welcome / Open Hours starts November 26, 2016 at 12:00PM**

Your intrepid host, J.J., would open up the Diode sooner but for the necessity of a strategic meeting with the barber. And the banker. And the postman. Oh, if only real life didn't get in the way so much. Those of you in Prof. Martin's class who still need to check out a real-live makerspace are welcome to stop by and say "Hi." I won't be doing anything that will suffer from a visit. CYa. Details: <http://ift.tt/2gscltj>

# **Open Hours starts November 23, 2016 at 05:30PM**

Bring any of your projects in and make something. This is an open hours event, and is not a formally guided class or workshop. It is a time to hang out, talk about and work on your projects. The host will try to help with what knowledge he has and if he is lacking certain knowledge the host will try to organize someone to be at the space to help you at the next event. Please Note: If this event receives no RSVPs, Dayton Diode holds no obligation to keep the space open and there is a possibility of the event being cancelled. So, please RSVP if you are planning on coming. If you cannot make it please modify your RSVP to reflect this.
